

# "Accessing Innovation"

## Warden CX Soybean Seed Treatment

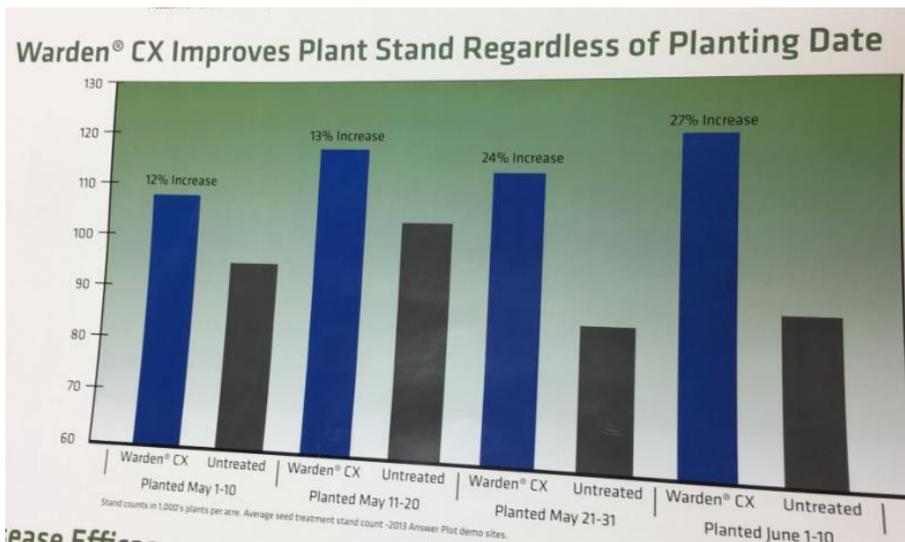

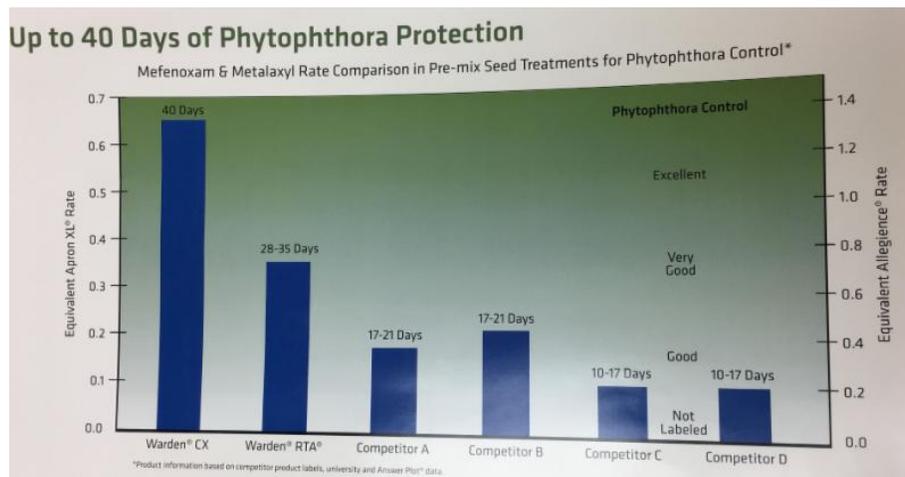

Warden CX seed treatment has the potential to optimize your yield and improve root health and plant vigor by helping reduce disease and insect damage. It contains three fungicides and one insecticide premix for broad seedling spectrum protection.

### Fungicides

- Vibrance (Sedaxane) for Rhizoctonia control and increased root health
- Highest rate of Apron XL (mefenoxam) available on the market for Pythium and Phytophthora protection
- Maxim 4FS (Fludioxonil) for broad spectrum protection and long residual control for Fusarium and many other early season diseases

### Insecticide

- Includes active ingredient in Cruiser insecticide for exceptional protection against an array of seed and foliar feeding insects

ease Efficiency

# Grain Market Update

The talk of the week was tariffs. China announced Wednesday \$50 billion in tariffs on US imported goods, which included soybeans. And last night President Trump released a statement about implementing another \$100 billion of tariffs on Chinese imports. China's announcements so far is just a proposal with no dates set. In the meantime, both futures and cash markets have shown more volatility than we've seen in several years. Soybeans have recovered a good portion of the losses experienced Wednesday, and gulf basis has risen despite the announcement. Brazil has placed a stronghold on their massive bean crop knowing they will be the main supplier to China if tariffs do go into effect. The US, on the other hand, has seen other countries come to the table to supply their demands.

While the volatility is enjoyed by traders, it is never exciting to have markets so focused on politics. There is a lot of uncertainty right now, and the best advice is to continue to sell in small increments. To many, we are still at levels we did not anticipate this year, and it only takes one action on either side of the Pacific to dramatically affect the markets. Hitting the high is not the goal. Risk management is. If you have any question how Ag Partners can help you in this regard, please give us a call or stop in. Have a good weekend.

## FieldView Equipment Capability

For you to obtain the benefits of streamlined, easy data collection and visualization as you make rounds in your fields, you must first ensure that your equipment is compatible with the digital tools you are using. Especially when there are so many different colors and types of equipment available, it is extremely helpful to find a format that can integrate most of that into one program. To ensure that your equipment is compatible with the FieldView application, click on the links below!

### Other Helpful Resources

As you think about starting planting, it is important to remember to update your iPad FieldView app to the latest version, make sure your seed prescriptions are exported and your hybrids have been loaded into the system. All these components will help make that transition into a new growing season go a little bit more smooth.

- Also [here](#) is a pre-planting checklist to make sure your FieldView account is ready, run through this with your agronomist before you head out to start planting
- And as always, address your questions and concerns with your agronomist!
