

## SST SUMMIT

---

### Grid Sampling

We are able to tailor our programs to fit your needs through composite or grid sampling. We pull samples on a 2.5-acre grid and have an option to overlay yield targets to the zones to give the most accurate recommendation.

### Scouting

We have two intensities of scouting packages available – a more intense program that gives you continual proactive insights into the progress of your fields, or a basic program that focuses more on the critical growth stages of your crop. Scouting includes subscriptions to R7 FMT and in-season imagery to give greater insights in our reports.
