

## Northern Regions: Soybean Progress Update

Josh Hinkle, Ag Partners Sales Agronomist

As we roll into August, it is time to think more seriously about applying fungicide and insecticide to soybeans. A few key indicators for this application are proper growth stage and knowing your disease and insect pressures. When soybeans begin the R3 stage, we must consider pressures may continue through the growing season as well.

## Southern Regions: Soybean Progress Update

Caleb Barger, Ag Partners Sales Agronomist

Across Ag Partners trade territory, there have been many challenges that vary across the board. From early season rainfall that kept us out of the field, to diseases beginning to emerge, it has been a long, tough season so far. With favorable growing conditions through August, there is plenty of yield potential we are predicting that can be taken out of the field this fall.

## Local Solution Trial Update: Take Off® LS

The included photos are a side-by-side progress photo of a Local Solution trial near Delia, Kansas conducted by Zach Hanner, Ag Partners Digital Ag & Services Specialist. In this trial photo, you can see where Take Off® LS was applied to alfalfa five days after cutting, and where the alfalfa was left untreated. As you can see in the photo, there is a significant growth difference in the alfalfa that has been treated with Take Off LS.

For those not familiar with the product, Take Off® LS is a revolutionary nutrient management technology from Verdesian Life Sciences that helps build bigger, stronger plants.

This proprietary formulation is designed to mimic a naturally-occurring molecule within the plant that optimizes the nutrient acquisition and assimilation process. Simply put, Take Off LS allows plants to more efficiently assimilate carbon and utilize nitrogen and other nutrients. The end result is enhanced nutrient use efficiency, leading to more bushels per acre per amount of nutrients applied.

Be sure to contact your Ag Partners Agronomist with any questions about Take Off LS or other nutrient management products.

## Join Us For Our Local Plot Tours

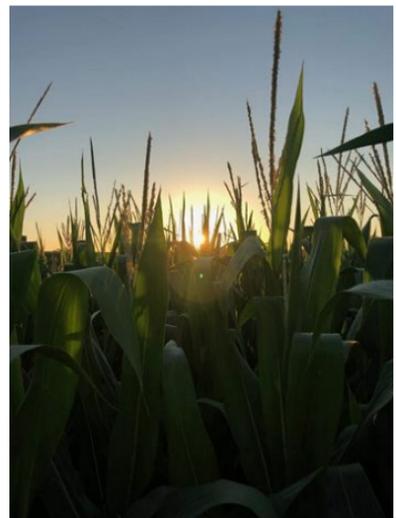

August 7, 2019 - Highland Grower Plot Tour

August 15, 2019 - Hiawatha Answer Plot Tour
